

Call for Participation as Shadower in Our Experiment

Minematsu-lab at UTokyo is running a project of L2 *online* intelligibility. Listeners' behaviors of listening to L2 English utterances are observed by having the listeners *shadow* the L2 utterances. Smoothness of shadowing indicates easiness and quickness of understanding.

Shadowability, i.e. how smoothly shadowing is performed, is measured by asking the shadowers, after shadowing, to read aloud the sentences intended by learners. The two utterances of shadowing and reading are compared to quantify shadowability.

We are seeking shadowers, whose utterances are recorded with a web-based program. You can join the experiment in your room, and it will take about 1 hour. Shadowers of any L1 are welcome.

Deadline is Jan 15 (Wed) and payment is 15 USD.

If you're interested in our experiment, please email to the following address. We'll give you more detailed instructions.
